

GOKART LITHIUM BATTERY INSTRUCTIONS

The instructions for looking after a lithium battery are slightly different from those for a lead/acid battery, so please read the following carefully.

FITTING THE BATTERY INTO THE GOKART

It is possible to damage the battery connections or the battery holder if you try to force the battery into the trolley. If it doesn't locate first time, just lift the battery slightly and re-position it. You must guide it into position gently. For more help, please see your GoKart assembly guide, our online instructional video (www.gokart.co.uk/video or www.gokartgolf.com/video), or call us on one of the numbers below.

GENERAL NOTES AND PRECAUTIONS

1. You should always recharge the battery as soon as possible after use. Within 48 hours is fine.
2. You should not leave the battery permanently on charge in between uses.
3. Generally, once the battery is charged, it should be disconnected from the charger, but it's OK to leave it on charge overnight and disconnect it in the morning.
4. A lithium battery will remain fully charged off the charger for up to four weeks.
5. All batteries should be stored away from heat sources and direct sunlight.
6. If the battery is not going to be used for more than two months, ideally it should be stored approximately 50% charged. To do this, play 18 holes, charge it for two hours and then disconnect it from the charger. When you're going to use the battery again, put it on charge the day before you play.

CHARGING INSTRUCTIONS

1. Use the battery.
2. Connect the battery to the charger.
3. Connect the charger to the mains
4. Check the RED light is showing.
5. After between three and six hours the charger light will turn GREEN.
6. It's normal for the GREEN light to flash sometimes; the battery is still fully charged.
7. When the GREEN light is showing, the battery is fully charged and should be disconnected from the charger.
8. Store the battery away from heat sources and direct sunlight.
