

# Fitting Instructions - Front wheel bearings

1. The easiest way to attach the front wheel is to unfold the trolley, fit the battery and tip it so the handle rests on the ground (picture 1).
2. Holding both the round nuts either side of the wheel, twist anti-clockwise until one side unscrews (picture 2).
3. Remove the loose nut completely and withdraw the front wheel spindle (picture 3). If it sticks, give it a tap with a mallet or block of wood.
4. Remove the front wheel and clear any grass or mud that has collected in the centre.
5. Remove the old bearings from the centre of the wheel (picture 4).
6. Fit the new bearings into the front wheel. They can be simply pressed home (picture 5).
7. Fit one of the new round nuts to the new spindle.
8. Position the bag support over the front forks and insert the new spindle through one side (picture 6).
9. Position the front wheel between the forks and push the spindle all the way through (picture 7).
10. Re-fit the remaining round nut; twisting them against each other, hand tighten firmly (picture 8).
